- QuarkXPress 7 and InDesign CS3 support
- Support for third-party font applications
- Customizable font & image paths
- Scans, reports and collects the entire job
- Much, much more !

Markzware FlightCheck® Professional is your prepress application used to manage quality control for printing. This solution provides both native file and PDF preflight checking and is backed by a United States patent. FlightCheck is an essential tool for Print Shops, Creative Designers, Prepress Departments, Customer Service Reps and Graphics Professionals within the digital print and publishing industries; helping you prepare PDF and other document types for commercial printing.

FlightCheck helps you create excellent PDF files for brochures, advertisements, manuals, and virtually any printed document. It provides complete quality control saving printers and publishers time and money by avoiding re-printing jobs.

FlightCheck preflights digital files thoroughly and warns you about potential printing problems while guiding you directly to them for repair. It issues a complete analysis of the print job highlighting potential errors, item by item, including wrong document size, missing fonts, incorrect colors, transparency of spot colors, incorrect image resolution and much more. FlightCheck then collects all required elements of the print job, such as images and fonts, to insure that jobs print as expected.
